Abstract of JP 11069315 (A)

PROBLEM TO BE SOLVED: To provide a character broadcasting reception device which can securely transfer important character data of urgent information which a reception terminal receives even if a portable terminal is not connected with the reception terminal by a private line. **SOLUTION:** A reception side radio connection part 106 and a transfer means selection table 109 are provided for the reception terminal 100a and a portable radio connection part 206 is provided for the portable terminal 200a. The urgent degree of character data which the reception terminal 100a receives is registered in the transfer means selection table 109. Data which are to be transferred to the portable terminal 200a without fail are transferred to the private line 300 and to the portable terminal 200a with a radio transfer means by the reception side radio connection part 106 and the portable radio connection part 206 when the private line 300 is not connected.
